SHASHANK SHETTY	2GI19CS139
VIJAY ANANTPUR	2GI19CS176

Under the guidance of

PROFESSOR . GAJENDRA DESHPANDE

INTRODUCTION :

Web design is the process of creating websites. It encompasses several different aspects, including webpage layout, content production, and graphic design. While the terms web design and web development are often used interchangeably, web design is technically a subset of the broader category of web development.

Websites are created using a markup language called HTML. Web designers build webpages using HTML tags that define the content and metadata of each page. The layout and appearance of the elements within a webpage are typically defined using CSS, or cascading style sheets. Therefore, most websites include a combination of HTML and CSS that defines how each page will appear in a browser.

Here in this project we have designed a fast-food website. It is also a responsive website. We can see it in a mobile view. We have made use of the html, css, bootstrap and little bit of java script.

OBJECTIVES OF PROJECT:

The main objective of our project is Providing quality content on your website, regularly adding new information, establishing trust, marketing your site on other websites and social media. Also Search engine optimization, well-organized content, user-friendly site, effective calls to action, increase conversion rate.

We also look into E-mail marketing lists, online support (live chat), webinars, and content designed to give your visitor a reason to come back. Understand the principles of creating an effective web page, including an in-depth consideration of information architecture. Become familiar with graphic design principles that relate to web design and learn how to implement theories into practice. Develop skills in analysing the usability of a web site. Understand how to plan and conduct user research related to web usability. Learn the language of the web: HTML and CSS. Learn CSS grid layout and flexbox. Learn techniques of responsive web design, including media queries. Develop skills in digital imaging Develop basic programming skills using Java script and jQuery. Be able to embed social media content into web pages.

SCOPE OF PROJECT :

Today the world is dominated by web. Every business is now conducted globally using the web. In this digital world, the online presence on the web is very important for every organization to advertise, promote and sell their products and services to worldwide user. We have taken a fast food concept which is one of the dominating sector that can be seen.

SOFTWARE USED :

In this project we have made use of Visual Studio for coding. We have also made use of html, css, java script and bootstrap. Also Google Chrome as our browser.

PROJECT SOURCE CODE :

/****** MAIN PAGE HTML CODE******/

CONCLUSION :

On overall, the project has achieved its objective. The project has provided the client/server for food ordering system and was successfully built in Visual Studio using html, css, java script and bootstrap. It provides more convenient and accurate method for staff in the restaurant since orders are transferred into the kitchen immediately and displayed for the chef for further process. In view of time saving, less time consuming by waiting and transferring order by staff in restaurant. In other words it simplifies all our work without any glitch's.
